Cloud Solutions for Healthcare

A Fully Integrated Documentation Platform

"SpeechMotion has streamlined our documentation processes by combining our dictation and transcription system into one, affordable solution. We have been very happy in our decision to select SpeechMotion."

WENDY MANGIN
DIRECTOR OF MEDICAL RECORDS
GOOD SAMARITAN HOSPITAL

A Customizable Documentation Solution To Fit Your Facility's Evolving Needs

SpeechMotion™ Enterprise is a state-of-the-art product suite encompassing voice capture, speech recognition, automatic distribution and e-signature applications for healthcare documentation. Designed to handle high volumes and complex workflows, SpeechMotion's has improved documentation efficiencies and productivity at hundreds of healthcare facilities across the country.

Cloud-Based Solution Secure, Reliable and Budget Friendly

A cloud solution, SpeechMotion reduces costs by eliminating hardware expenditures and support contracts. A Software-as-a-Service (SaaS), the cost of working with SpeechMotion is entirely based on usage. This means there are never any unexpected or unallocated costs to squeeze into a budget.

The ability to quickly monitor and access documentation was a key focal point in the design of SpeechMotion. Residing in the cloud makes SpeechMotion accessible anywhere without the need for a VPN connection. Your providers, staff and managers can access SpeechMotion anywhere, including home or abroad. SpeechMotion may be accessed either from our client application, installed locally, or via our web-portal, making SpeechMotion available anywhere your users have an internet connection.

Patient confidentiality is a critical aspect of healthcare data management. SpeechMotion provides encryption of all incoming and outgoing data, fully in line with HIPAA/ PIPEDA requirements.

Enterprise-Wide Integrated Solution No Disruption to Your Clinical Workflow

SpeechMotion's customized workflow routing, back-end speech recognition and automated distribution enables facilities to receive documents faster without constant management, freeing staff to concentrate on other tasks, like billing and scheduling. SpeechMotion seamlessly integrates with your EMR, making documents available instantly throughout your organization.

Over the years, SpeechMotion has successfully integrated with a number of leading EMR systems, including Epic, Cerner, McKesson, Meditech, AllScripts, NextGen and CPSi.

Modules for general account maintenance, statistical reporting, voice management, and document archival are available to managers both on and off site. This allows the customer to directly monitor and maintain their information, rather than submitting change requests, which can cause unnecessary delays.

HIM Operations Liaison
Wishard Health Services

Unified, Cloud-Based Technologies Speech Recognition Accessible Anywhere

SpeechMotion Enterprise offers an unprecedented unified back-end and front-end speech recognition technology. Voice profiles are trained using traditional transcription, eliminating the need for your physicians to train the engine. Flexible workflow and filtering options allow you to select the providers and worktypes to process through back-end recognition, giving you complete control over utilization.

On the front-end, providers may make use of their voice profile to document a patient encounter directly into your EMR. Cloud-based, the front-end speech recognition profile is available anywhere the provider travels and is always up-to-date with latest technology releases.

Providers may configure their own set of front-end voice commands to automatically insert common text snippets, as well as replace mouse pointing-and-clicking. Users have decreased their documentation time by 80% utilizing SpeechMotion's front-end speech recognition.

Clinical Documentation Improvement Document Accuracy and Completeness

Facilities seeking to improve documentation completeness and accuracy may elect to implement SpeechMotion's Clinical Documentation Improvement workflow. Identify required information or critical data

elements in documentation, that when missing will trigger an alert(s) to either a transcription manager, HIM staff or the dictating provider. The alerted user may then add the missing information, either directly to the report or via dictation, so only accurate and complete clinical documentation flows back to your EMR.

Improving clinical documentation has become an important focal point for HIM managers with the adoption of ICD-10. Assist your billing process by ensuring only complete clinical documentation routes to your coding team with SpeechMotion's Clinical Documentation Improvement workflow.

Drive Process Improvements Statistical Reporting, Auditing and Communication

SpeechMotion tracks a variety of statistics about your documentation that can be used by your facility to improve patient care. Track lag time between a patient encounter and dictation on the encounter by your providers. Be alerted when documentation lacks patient demographics. Audit documentation for overall quality and accuracy.

Facilities may also utilize SpeechMotion's robust notes and alert tools for secure communication between your staff. Questions and comments are left by the user with a document and accessible by other users, while alerts are sent via email. SpeechMotion provides everything your facility needs to drive clinical documentation accuracy.

250 Million Lines Annually

500 Healthcare Facilities

110,000 Users

15 Years of Service

SpeechMotion Enterprise

Across the country, healthcare facilities are selecting SpeechMotion Enterprise because of the options it provides their physicians and staff, not to mention our unsurpassed customer service.

SpeechMotion Enterprise provides healthcare facilities everything they need to manage their documentation:

- ADT, Orders, HL7 Integration
- Deficiency & Scheduling Interfacing
- SmartPhone & PC Dictation
- Front-End & Back-End Speech Recognition
- Electronic Signature
- Comprehensive Reporting & Auditing
- Web Portal & Client Access
- Clinical Documentation Improvement Workflow
- Centralized Management Tools
- Automated Alerts & Messaging
- Fully HIPAA Compliant

About SpeechMotion

Fully Integrated Documentation Solution

With hundreds of deployments and thousands of users, SpeechMotion Enterprise has proven to be the reliable, scalable and technically advanced choice for a customized medical documentation solution.

Healthcare documentation does not need to be difficult or time consuming. Nor does a better clinical solution need to cost you thousands. Our simple, pay-as-you-go

To learn how SpeechMotion can assist your organization in meeting your strategic goals, like ICD-10 adoption, while reducing costs, overcoming EMR resistance and streamlining efficiencies, visit www.speechmotion.com.
